Electric Vehicle Market Performance & Insights

Demo and Presentation Script

Repository: https://github.com/manasgite54-cmd/EV-project

Purpose and Context

This script supports a concise demonstration. Show only functions that are working at presentation time and distinguish local execution from any public deployment.

Detailed Project-Specific Content

- Opening: “Hello, my name is [TO BE PROVIDED]. My project is Electric Vehicle Market Performance & Insights. It combines data cleaning, database operations, Tableau visualization and a Flask web interface to explore EV records.”
- Problem/objective: explain that vehicle attributes can be difficult to compare manually; the project makes available records easier to explore but does not claim verified market share without supporting source data.
- Pipeline: show the project structure, Python/Pandas workflow, cleaned CSV and JSON report. State the reported 299,999 record count and display the actual report if possible.
- Database: show the real SQLite database and a working SQL query only if these artifacts are present and tested.
- Dashboard: open https://public.tableau.com/views/Book1_17931030431560/EVMarketOverview?:showVizHome=no&:embed=yes. Demonstrate a filter and one chart; read the actual title, measure and units rather than inventing a finding.
- Story: open https://public.tableau.com/views/Book1_17931030431560/Story1?:showVizHome=no&:embed=yes and explain how the narrative moves from dataset scope to comparisons and limitations.
- Website: visit Overview, Dashboard, Story and Methodology pages. If only local execution is verified, describe it as the local application.
- Limitations: explain that results depend on source coverage, field definitions, units and record grain; record count is not necessarily sales.
- Closing: summarize the integrated workflow and mention future improvements such as stronger provenance, automated tests and reproducible deployment.
- Pre-demo checklist: test links/network, open the site in advance, verify CSV/report, test database/query, hide credentials/private files, prepare fallback screenshots/direct links, check screen scaling and rehearse timing.
- Suggested slides: title/team; problem/objectives; architecture/data flow; cleaning/database; dashboard; story; website; testing/limitations; conclusion.
- Presenter/team names, enrollment numbers, supervisor, demo date and actual run environment: [TO BE PROVIDED].

Project References and Artifact Locations

Project: Electric Vehicle Market Performance & Insights Repository: https://github.com/manasgite54-cmd/EV-project Processed dataset: data/processed/ev_market_clean.csv Reported processed records: 299,999 Cleaning report: data/processed/cleaning_report.json Tableau Dashboard: https://public.tableau.com/views/Book1_17931030431560/EVMarketOverview?:showVizHome=no&:embed=yes Tableau Story: https://public.tableau.com/views/Book1_17931030431560/Story1?:showVizHome=no&:embed=yes Accuracy note: the record count and artifact paths above are reported by the project owner. Exact schema, source provenance, units, calculated statistics, test results, and deployment status must be checked against the repository and actual artifacts. No unsupported results, approvals, or signatures are claimed.

Status: Detailed project-specific document. Any [TO BE PROVIDED], [TO BE VERIFIED] or [TO BE CALCULATED] item requires confirmation. No supervisor approval, signature, unverified test pass or successful deployment is implied.
